3 February 2016

## Invitation to comment on a genetically modified (GM) wheat field trial

Australia's gene technology regulatory system is designed to protect the health and safety of people and the environment by identifying risks posed by, or as a result of, gene technology and managing those risks.

The Gene Technology Regulator is currently assessing licence application DIR 142 from the Victorian Department of Economic Development, Jobs, Transport and Resources. The application is for a field trial (limited and controlled release) of wheat genetically modified for enhanced nitrogen use efficiency and water use efficiency. The purpose of the field trial is to assess the agronomic performance of the GM wheat lines under field conditions.

The trial is proposed to take place at one site in Horsham, Victoria, between May 2016 and May 2018 with a maximum planting area of 3 hectares per year. The GM wheat would not be used in human food or animal feed.

A consultation Risk Assessment and Risk Management Plan (RARMP) has been prepared, which concludes that the proposed release would pose negligible risk to human health and safety or to the environment. A range of draft licence conditions would limit the size, location and duration of the release, as well as restrict the spread and persistence of the GMOs and the introduced genetic material.

The Regulator welcomes written submissions in order to finalise the RARMP, which will then inform the decision on whether or not to issue the licence. The consultation RARMP and related documents can be obtained from the OGTR website under [What's New](#) or by contacting the Office. Please quote application DIR 142 in any correspondence.

Submissions should be received by close of business on **16 March 2016**.
