DE387	C-Plate - Fixed and Variable Screws	C-Plate Anterior Cervical Plates are inserted via an anterior approach to the cervical spine, in order to fix one or two levels of vertebrae together. Such fixation is performed to cause bony fusion between the levels and is done in order to address pain, instability, and/or a range of other indications. The C-Plate system consists of low-profile (1.6mm thick) pre-contoured plates of varying sizes and a full range of screws. The plates themselves contain an innovative screw-locking mechanism utilising an elastic locking ring which allows the surgeon choice between semi-fixed or variable-angle self-tapping screws. DE385	C-Plate Cervical Plates 22-54mm	C-Plate Anterior Cervical Plates are inserted via an anterior approach to the cervical spine, in order to fix one or two levels of vertebrae together. Such fixation is performed to cause bony fusion between levels and is done in order to address pain, instability, and/or a range of other indications. The C-Plate System consists of low-profile (1.6mm thick) pre-contoured plates of varying sizes and a full range of screws. The plates themselves contain an innovative screw-locking mechanism utilising an elastic locking ring which allows the surgeon choice between semi-fixed or variable-angle self-tapping screws. DE377	ROI-T TLIF Cage	ROI-T is a TLIF (Transforaminal Lumbar Interbody Fusion) interbody fusion cage manufactured from PPEK-Optima, designed for ease of insertion and graft maximisation. The transforaminal approach allows for exposure of the disc space by removing the facet joints and protecting the nerve roots. The disc space is entered and disc material is removed. The ROI-T cage is filled with bone graft material and is placed into the cage space to maintain the disc height and impart additional stability to the construct. Note that ROI-T cages must be used in conjunction with a posterior screw and rod system to properly stabilise the segments and enable fusion to occur.	Lordotic angles 0, 5 and 9 degrees. Length 30mm. Heights: 8 to 16mm in increments of 1 mm.	\$3,600.00

NV131	Foundation LL (Cage)	<p>The Foundation LL System is indicated for spinal fusion procedures in skeletally mature patients with degenerative disc disease (DOD) at one or two contiguous levels in the lumbar spine (L2 to S1). DOD is defined as back pain of discogenic origin with degeneration of the disc confirmed by patient history and radiographic studies. DOD patients may also have up to Grade 1 spondylolisthesis or retrolisthesis at the involved levels. These patients may have had a previous non-fusion spinal surgery at the involved level(s). The Foundation LL System is intended for use with autograft.</p> <p>The Foundation LL System 10-20 degree lordotic cages may be used as a standalone system.</p> <p>The Foundation LL System 25-30 degree lordotic cages must be used with supplemental internal spinal fixation systems (i.e. , posterior pedicle screw and rod system) that are cleared by the FDA for use in the lumbar spine.
