infusion. The Arrow AutoFuser Disposable Pain Pump from Teleflex is designed to safely and reliably deliver regional anaesthesia medications to help effectively manage post-operative pain in patients following surgery involving implanted prosthesis such as knee, hip or shoulder reconstructions. Effective management of postoperative pain in the immediate and early postoperative period facilitates early patient mobilisation and reduces the likelihood of implanted prosthesis failure. The device is also used to facilitate the delivery of epidural medical during labour in expectant mothers and can also be used for the delivery of medications necessary in the treatment of oncology patients. The Arrow AutoFuser Disposable Pain Pump offers multiple reservoir sizes and configurations to meet a variety of clinical demands. The AutoSelector Variable Rate Selector gives the clinician the ability to adjust the basal infusion rate to meet the individualized needs of each patient to help control their post-operative pain. The patient controlled bolus gives patients the ability to address breakthrough pain without interrupting the continuous basal infusion.

Fresenius Kabi Australia Pty Ltd

FK017	Agilia SP PCA Infusion System	Agilia SP PCA is a programmable electronic medical system dedicated to administering a pre-determined volume of a syringe at a programmed rate. This syringe pump ensures a fluid delivery, by pushing the syringe plunger and advancing the liquid to the patient through an extension set. The Agilia SP PCA syringe pump can also be used for general infusions on adults, pediatrics, and neonatal patients for the intermittent or continuous delivery of parenteral fluids (such as solutions, colloids, parenteral nutrition), medications (such as diluted drugs, chemotherapy, anesthesia drugs), blood and blood derivatives, and medications through clinically accepted routes of administration. It is intended for use by trained healthcare professionals in clinical healthcare facilities. In PCA therapy, it is also intended for use by the patient in order to self administer doses of analgesic agent, after receiving appropriate training and instructions from the clinical staff. Agilia SP PCA is a transportable and reusable device that can be used every day.	The size of a syringe can be 5, 10, 20, 30 or 50/60 mL.	\$3,470.00

PowerPICC SOLO^{2™} is packaged in a tray with accessories for reliable long (greater than 30 days) or short (less than 30 days) term vascular access. The PowerPICC SOLO^{2™} catheter valve controls the flow of fluids to provide clamp-free infusion therapy. Positive pressure into the catheter (gravity, pump, syringe) will open the valve, allowing fluid infusion. When negative pressure (aspiration) is applied, the valve opens allowing for the withdrawal of blood into a syringe.

The stylet material provides internal reinforcement to aid in catheter placement. The Sherlock 3CG stylet may be used with the Sherlock 3CG Tip Confirmation System (TCS) to provide catheter tip placement information during the procedure. The Sherlock 3CG stylet, Sherlock 3CG TCS system, and the Site~Rite 8 Ultrasound System, include a comprehensive, integrated set of PICC placement tools such as vein location, lumen size visualisation, needle guided vein access, catheter tip orientation, catheter tip depth, catheter tip placement using ECG, and ECG placement documentation. In most instances, this removes the need for confirming PICC tip placement through radiological methods.	5 French Triple Lumen	\$152.00
