posterior chamber intraocular lens is indicated for the replacement of the human lens to achieve the visual correction of aphakia and pre-existing corneal astigmatism in astigmatic adult patients in whom a cataractous lens has been removed by phacoemulsification who desire improved uncorrected vision, reduction of residual refractive cylinder, useful near and intermediate visual functions, and reduced spectacle dependence. The intraocular lens is intended to maintain rotational stability after placement in the capsular bag and is intended to be placed in the capsular bag. The GF-Glistening Free, material is an acrylic copolymer of medical quality which includes a UV absorbing filter. For the yellow intraocular lenses, a blue light-filtering chromophore is covalently bounded to the UV-absorbing material and the spectral transmittance through a central diopter IOL. They have biconvex optics with an aspheric anterior diffractive trifocal structure that partitions the light to give pseudo-accommodative vision and a posterior toric optic which compensates for corneal astigmatism. The add-power for near vision is + 3.5 diopters and for the intermediate vision + 1.75 diopters at IOL plane allowing the patient to benefit from near vision without a reading aid, and from increased spectacle independence for near and intermediate visions.

RQ084	Glaukos iStent inject W System	An improved product to PLAC billing code RQ075 (product name iStent Inject) with a wider flange for better surgeon visualisation and stent confirmation. The improvement includes a delivery injection unit with 2 stents. Intended purpose per TGA submission is for implantation with or without cataract surgery and to reduce intraocular pressure in adult patients diagnosed with mild to moderate primary open-angle glaucoma (POAG) currently treated with ocular hypotensive medication.	One Size	\$1,444.00
RQ075	iStent Inject System	The iStent Inject is a pre-loaded injection system which delivers two stents across the trabecular	One size	\$1,444.00

meshwork to provide a pathway for aqueous humor to flow from the anterior chamber. It is indicated for use in conjunction with cataract surgery for the reduction of IOP in subjects with mild to moderate open angle glaucoma currently treated with ocular hypotensive medication.

QQ325	Glaukos iStent Infinite System	The iStent infinite System consists of a single-use pre-loaded injector designed to deliver, with an unlimited insertion mechanism, three intraocular stents (Model G2-W) through a single incision into Schlemm's canal, creating a bypass through the trabecular meshwork to increase physiological aqueous outflow and reduce IOP. The stents used in the iStent infinite System are identical to those in iStent inject W (Billing code RQ084), which is designed to deliver two stents.	One Size	\$1,444.00
-------	--------------------------------	--	----------	------------

As per the TGA submission and associated Instructions for Use, the iStent infinite is intended to reduce IOP in adult patients with primary open-angle glaucoma, pseudo-exfoliative glaucoma or pigmentary glaucoma, and can be performed with or without cataract surgery. It may also be implanted in patients who continue to have elevated IOP despite prior treatment with glaucoma medications and/or conventional glaucoma surgery.

RC012	PORP - Partial Ossicular Replacement Prosthesis	Partial implant made of titanium, for reconstructing a (partially) destroyed middle ear ossicular chain (chain of sound transmission) between the stapes and the tympanic membrane level in fixed and variable lengths. Fixed - The implant body is a single piece and was made from a single part only, i.e. it has no susceptible material bonding points such as weld seams. The implant can be subdivided into three areas: 1.) the implant bell that is offered in 2 embodiments:	Central Head with slitted Bell - shaft diam. 0.3mm, Length 0.5 - 3.5mm Offset Head with slitted Bell - shaft diam. 0.3mm, Length 0.5 - 3.5mm Central Head with Complete Bell - shaft diam. 0.3mm, Length 0.5 - 3.5mm Partial Titanium Implant with Separate Head, shaft 0 0.3 mm,	\$227.00

Unslitted and slitted; 2.) the implant shaft; 3.) the perforated implant plate. The implant plate can be arranged centrally (round) towards the implant shaft or eccentrically (oval). In the eccentric version (oval), an additional groove has been worked into the plate to improve receiving the malleus handle.

Length 5.5-2.5mm (variable)
 Partial Titanium Implant with
 Separate Head, shaft 0.3 mm,
 Length 5.5-2.0mm (variable)

Variable - The implant body consists of two parts, a shortenable shaft that is firmly bound to the prosthesis bell, and a prosthesis plate that has been provided with a borehole in its underside. The borehole has been dimensionally designed in such a way that it can receive the shaft after the latter has been adapted lengthwise to the respective situation in the middle ear.

The surface of the predefined contact point (upper side of implant plate and inner side of the bell) is roughened in order to facilitate better bonding to the eardrum resp. the stapes head.

RC010	Stapes Prosheses	<p>For reconstruction of the sound conduction chain between middle ear and inner ear through replacement of the stapes. System procedures (e.g. closure and healing of ESD/EMR sites, and closing of fistula, perforation or leaks).using tensioned helical tacks. The X-Tack system comprises respective delivery systems for tacking and cinching; tethered stainless steel HeliX tacks; and a PEEK cinch system. 1. The delivery system is composed of biocompatible plastic and drives the HeliX tacks into the tissue. This is replaced with the PEEK cinching system when the defect is ready for compression. 2. The stainless steel HeliX tacks are placed around the defect with the tether providing compression when tensioned and so enabling closure. Compression is maintained using a PEEK cinch which terminates the closing construct. 3. The PEEK cinching system is a delivery system that deploys a PEEK plug/collar to the tethering system to ensure the tissue in the defect area remains compressed.

stent is to retain the occlusive devices within the aneurysm. Occlusive devices can be delivered prior to stent placement or after stent placement. The Atlas Stent System consists of a self-expanding, sterile, nitinol stent preloaded over a delivery wire inside an introducer sheath. The sheath and delivery wire are used to transfer the stent into a 0.0165 to 0.017 inch internal diameter microcatheter. After transferring the stent, the sheath is removed from the proximal end of the delivery wire. The delivery wire is then used to advance the stent to the distal end of the microcatheter. The microcatheter and stent system are repositioned as a unit to ensure the stent is located across the aneurysm. The stent is deployed by stabilizing the delivery wire and withdrawing the microcatheter. The Neuroform Atlas stent cannot be repositioned or captured once deployed.

Akva Surgical Pty Ltd

VK039 C-Nail C-Nail is an intramedullary nail for minimal-invasive fixation of intraarticular calcaneal fractures. The principle is to stabilise with the nail the four to five main fragments of the fractured calcaneus in conjunction with up to seven interlocking screws and thus creating angular stable fixation. The maximum stability is achieved by fixing the sustentacular fragment towards the nail with two interlocking screws guided by a very precise aiming devise. The design of the nail is clearly marked "L" for left foot and "R" for right foot. The nail length is 65mm with a diameter of 8mm. The nail can be extended and closed with an end cap that comes in 0mm, 5mm, 10mm, 15mm and 20mm sizes. C-Nail: 65mm length x 8mm diameter (Left and Right option).

VK016 Orthofix eight-Plate	Guided growth plate for correction of angular deformities over an open growth plate. Titanium, two screw holes, wire guided.	12mm, 16mm
VK028 Quad Plate Plus	The Guided Growth Plate System Plus consists of different sizes of quad- Plate plus, different cannulated and solid screw options. The device is designed for the gradual correction of paediatric congenital as well as acquired deformities in both the upper and lower extremities, provided that the physics are not fused. The plates feature a contoured waist and low profile for paediatric usage. There is a centre hole in the plates for a temporary guide pin to be implanted to aid application and removal of the plate. The plates are attached to the external surface of the bone over the growth plate by screws. These screws are not locked to the plate, but rather are allowed to swivel and diverge in their position as bone growth occurs. The implant acts like a flexible hinge, permitting growth at the growth plate to gradually straighten the limb.	16mm plate 22mm plate

QQ052 Xiros Secure-Loop with Button	The SECURE-LOOP fixation device consists of a sterile and non-absorbable polyester continuous loop captured on a titanium alloy button. The button sits on the exit to a bone tunnel on the cortex, suspending the continuous loop inside the tunnel to provide secure, strong fixation for ligament reconstruction. The SECURE-LOOP fixation device is supplied with sutures that are used to pull the graft assembly into place and then flip the button, allowing ligament reconstruction to be performed arthroscopically. The SECURE-LOOP has been designed to be implantable using generic ACL guidewire systems and a standard technique. The suture meets applicable specifications established by the United States Pharmacopeia (USP) for nonabsorbable surgical sutures. for trauma applications, limb lengthening and deformity correction. It is based on the science, methodology and principles of Prof Ilizarov. The circular frame is simple, offering preassembled functional components that are easy to connect and operate. The frame is stable with anti-rotational feature on connection elements that prevents any undesirable movement. Its unique wire and half pin fixation elements provide efficient bone segment stabilisation. A biomechanically superior metal-plastic interface is stable both during and between adjustments. The system is versatile, consisting of rings, half-rings, foot plates, 5/8 rings and arches. Full control of bone segments accomplished with Orthofix circular frame allows precise movement of segments without compromising stability.

VK032	3D Rapid Adjust Strut	The rapid adjust strut is made of two metal casings encapsulating a threaded rod. It has the ability to correct acutely or gradually. The rapid adjust strut ends have 45 degree locking angulation with 360 degree rotation. The rapid adjust struts have unique ball and claw universal lockable joint at both ends of the strut. Two rapid adjust struts are sufficient for fracture reduction and initial stabilisation, whereas three rapid adjust struts are necessary for walking and weight bearing. Loosening of the ball claw joints allows for verification of the amplitude of angular correction and horizontal translation, magnitude of rotational correction and stability of fixation in coronal, sagittal and horizontal planes.	Short 70 - 104mm range Medium 98 - 188mm range Long 163 - 300mm range
VK033	3D Telescopic Strut	Struts consist of two telescopic aluminium tubes, outer tube and an inner tube, which can be locked together at various lengths using the side locking bolt and clamp washer. The inner tube is attached to a spring-loaded, black knurled adjustment knob. The adjustment knob	Struts are available in four sizes - ultrashort, short, medium and long providing adjustment range from 45mm to 318mm. Ultrashort strut range

mates with the threaded rod in a manner such that the rod translates relative to the inner tube when the knob is rotated. This will provide gradual changes of overall strut length in 0.5mm increments. A reference arrow with plus sign located on the base of the adjustment knob indicates the direction of turning to perform strut elongation - distraction. Each strut has two special joints and one at the base of the outer tube and the other at the end of the threaded rod. Each joint has a mounting stud, which can be inserted into the mounting holes on the ring tabs and held in place by the locking screw. The rapid adjustment of the strut length is achieved by untightening the side locking bolt, sliding the inner tube relative to the outer tube to the desired length. The rapid adjustment is indicated by the inner tube scale in 1mm increments relative to the orange line mark on the outer tube. The gradual adjustment is achieved by pulling and rotating the adjustment knob resulting in a noticeable detect click every 0.5mm of adjustment. Gradual adjustment is indicated by the scale relative to the green line

mark.

HQ003	SURGITIME Titanium Mesh	Titanium Surgitime is a non absorbable titanium mesh made of pure titanium (ASTM F-67). It comes in many different lengths, widths, thicknesses and hole diameters. It assist bone neoformation, acting as a barrier hindering the migration of epithelial cells and of the conjunctive tissues, thus avoiding competition with the bone graft.	34x25mm- Thickness 0.04mm/Round hole 0,15mm 34x25mm- Thickness 0.04mm/Round hole 0,85mm 34x25mm- Thickness 0,08mm/Round hole 0,85mm	\$161.00

GI021	Geistlich Bio-Gide	Geistlich Bio-Gide is a collagen membrane containing porcine collagen in a bilayer structure. It is used for guided bone regeneration and periodontal tissue regeneration in oral and maxillofacial surgery.	13 x 25 mm, 25 x 25 mm, 30 x 40 mm	\$224.00
GI019	Geistlich Bio-Gide Perio / Geistlich Bio-Gide Compressed	Geistlich Bio-Gide Perio and Geistlich Bio-Gide Compressed are collagen membranes containing porcine collagen in a bilayer structure. Geistlich Bio-Gide Perio is used for guided bone regeneration and is	16 x 22 mm, 13 x 25 mm, 20 x 30 mm	\$224.00

especially indicated for periodontal bone defects in oral and maxillofacial surgery.
Geistlich Bio-Gide Compressed is intended to be used as a barrier membrane in the regeneration of bone defects.

GI014	Geistlich Mucograft, Geistlich Mucograft Seal	Collagen Matrix	15mm x 20mm, 20mm x 30mm, diameter 8mm, diameter 12mm	\$224.00
GI020	Geistlich Bio-Gide Shape	Geistlich Bio-Gide Shape is intended to be used as a barrier membrane in the regeneration of bone defects and used after bone grafting procedures in extraction sockets. Because of its elasticity, Geistlich Bio-Gide Shape should be used in combination with void-filling bone graft materials such as autologous bone or bone substitutes (e.g. Geistlich Bio-Oss / Geistlich Bio-Oss Collagen) whenever possible. The porous surface, facing the bone, allows the ingrowth of bone-forming cells. The dense surface, facing the soft tissue, prevents the ingrowth of fibrous tissue into the bone defect.	14 x 24 mm	\$224.00

GI018	Master Pin	Pins used in dental surgery for the fixation of membranes (absorbable, non-absorbable and titanium membranes) in order to avoid micro-mobility of the graft. With sharp tips and the stable construction, the pins can be precisely inserted into cortical bones. The pins have an additional minithread and are a hybrid composed of a screw and pin. The thread makes easy and safe removal possible after a healing period has taken place. This thread enlarges the surface of the shaft at the same time and therefore offers more stability.	3.5mm	\$76.00

This level of bone preservation is not possible with traditional, screw-form implants because their circular section poses a geometrical discrepancy with the anatomy.	1.8mm x 5.0mm (rectangle) in lengths of 9,11,13 & 15mm 2.9mm x 5.0mm (rectangle) in lengths of 9,11,13 & 15mm	\$351.00

MAXONIQ PTY LTD

QQ132	OsseoFrame	The MAXONIQ OsseoFrame is a subperiosteal, titanium (Ti64), patient-specific surgical implant individually designed from a 3D Computed Tomography (CT) or Cone Beam CT (CBCT) scan provided to MAXONIQ by the referring surgeon. The OsseoFrame is fixated to alveolar bone of the maxilla or mandible to fit the natural contours. An OsseoFrame is comprised of a baseplate with holes for screw fixation and transmucosal connectors for dental prosthesis attachment. The OsseoFrame is intended to be used on the alveolar bone of the mandible or maxilla to provide a stable and permanent platform for fixation of the dental prosthesis. The OsseoFrame is indicated to restore oral function and facial aesthetics in edentulous patients missing 3 or more adjacent teeth with atrophic jaws, low sinus floors or who have undergone partial jaw resection. The OsseoFrame may also be beneficial for patients who cannot tolerate removable dentures and desire a fixed solution; who cannot tolerate complex bone	The OsseoFrame may be supplied as either a 2 post, 3 post or 4 post variant of the prosthesis. Effectively, these size variants are designed for partial overdentures (2 and 3 post variants) or a 4 post variant for full arch restoration. The 4 post, full arch variant is designed to treat a fully edentulous patient, whilst the 2 and 3 post variants are designed to treat patients missing 3 or more teeth. The clinician and prosthodontist will determine the appropriate number of posts for an individual patient.	\$3,254.00

graft surgery to support dental implants; or if they want replacement teeth immediately after surgery. The dental prosthesis is supplied separately and is to be fitted by surgeon, a restorative dentist or a prosthodontist. The OsseoFrame may be supplied with a biomodel and a surgical guide, both these items have separate Prosthesis Listings.

activity. PLATINIUM VR is also equipped with the RF wireless technology which enables remote monitoring of patients who have the Sorin SMARTVIEW Monitor installed at home, wireless interrogation and device programming by Orchestra Plus programmer equipped with ORCHESTRA PLUS LINK accessory. PLATINIUM VR provides high energy shocks (42 J) for enhanced safety, as well as automatic lead measurements to monitor system integrity. PLATINIUM VR is protected against high-frequency signals emitted by cellular telephones. The PLATINIUM VR can serve as a defibrillation electrode (active housing) with a total surface area of 63 cm².

The PLATINIUM VR is designed to recognize and treat slow or fast VT and VF by continuously monitoring ventricular activity to identify persistent ventricular arrhythmias and to deliver appropriate therapies. PLATINIUM VR features DISCRIMINATION algorithm, which is specifically designed to differentiate ventricular tachycardias from fast rhythms of supraventricular origin. DISCRIMINATION continuously monitors R-R interval stability, searches for long cycles and evaluates sudden onset.

TU068	Thoraflex™ Hybrid	<p>Thoraflex™ Hybrid device is a woven polyester prosthesis, with the addition of nitinol ring stents.</p> <p>The device is specifically designed for the treatment of aneurysm and/or dissection in the ascending thoracic aorta, aortic arch and descending thoracic aorta. Branches are provided to accommodate reconstruction of the major aortic branch vessels and intra-operative attachment of a perfusion cannula during cardio-pulmonary bypass where antegrade perfusion techniques are employed.</p> <p>The stented section of the graft enables treatment of the diseased descending thoracic aorta in a single-stage procedure without the need to anastomose a stented and unstented prostheses together.</p> <p>Thoraflex Hybrid™ device has been impregnated with an absorbable protein. The aim of the impregnation is to provide a polyester vascular prosthesis which does not require pre-clotting. The protein is a bovine gelatin which has been cross-linked to a set level to control its rate of removal. It serves in place of fibrin, which seals the polyester prosthesis during normal pre-clotting. The gelatin is hydrolyzed within approximately 14 days and is replaced by normal tissue incorporation. Gelatin has been chosen as it is a non-toxic protein, a fact which is reflected by its extensive use as a safe plasma expander.</p>	<p>The stent graft comes in two nominal lengths (100mm or 150mm) with different inner vessel (ID) and outside vessel OD graft diameters (mm).</p> <p>There are 40 catalogue items with the above combinations</p> <p>Overall length: 340-390 mm. LC197	Delta Mobile Liner UHMWPE	The Mobile Liner UHMWPE functions as part of a double mobility system. It is coupled with an outer liner before being fitted onto the head of a femoral stem. The inner liner provides the articulating surface within the outer liner and the coupled liner provides the articulating surface with the acetabular shell after insertion into the acetabular shell/Cup as part of a total hip arthroplasty. LC198	2M Cups Double Mobility System Mobile Liners (UHMWPE)	The liner functions as part of a double mobility system. The liner articulates with an acetabular cup and femoral head as part of a total hip arthroplasty. The liner has an inner clearance of 0.3 mm with respect to the femoral head. The outer clearance has been increased to 0.6 mm to avoid locking of the outer joint due to the interposition of fibrous tissue. The centre of the inner head is cranialized with respect to the centre of the liner (1,5 mm), to permit the self-centring of the system. ER646	Forza XP Expandable Spacer System	The Forza XP Expandable Spacer System is comprised of an assortment of non-sterile as well as sterile, single use, titanium alloy and polyetheretherketone (PEEK) polymer spacers with height expansion capability. The expandable interbody spacer is inserted into the lumbar disc space and expanded to fit the patient anatomy. The implants are offered in parallel, lordotic, and hyperlordotic configurations to help restore the natural curvature of the spine. The implants can be used in single placement or pairs with typical approaches being transforaminal lumbar interbody fusion (TLIF) and posterior lumbar interbody fusion (PLIF). The implants feature a bulleted nose for ease of insertion and anti-migration ripples on both the inferior and superior surfaces to provide increased stability and help prevent anterior/posterior movement of the device. The extracellular matrix is the structural framework that provides support and organization to tissues. It consists of various proteins, such as collagen, elastin, and other growth factors, that contribute to tissue strength and regeneration. The resulting acellular dermal matrix serves as a scaffold for tissue repair and regeneration. It can be used in procedures like breast reconstruction, hernia repair, wound healing, and other soft tissue reconstructions.

Positive pressure into the catheter (gravity, pump, syringe) will open the valve, allowing fluid infusion. When negative	5 French Triple Lumen	\$131.00

pressure (aspiration) is applied, the valve opens allowing for the withdrawal of blood into a syringe.

BA303	Provena™ Midline Catheter	The Provena™ Midline Catheters are intended to be inserted into a patient's vascular system to sample blood, administer fluids and power injection of contrast media. The unique feature of Provena™ Midline Catheters is that they are configured with a smaller outer diameter with minimal reduction to the intraluminal area assisting in providing the optimal catheter to vein ratio, whilst still enabling good flow rates to ensure the therapy delivery is uncompromised.	4Fr dual lumen	\$131.00

BA299	PowerPICC SOLO ² ™ HF 5 French Triple Lumen 3CG	PowerPICC SOLO ² ™ HF 5-Fr Triple Lumen 3CG comes with a Sherlock 3CG stylet which is made of specifically formulated materials designed to aid in the placement of peripherally inserted central catheters. The stylet material provides internal reinforcement to aid in catheter placement. The Sherlock 3CG stylet may be used with the Sherlock 3CG Tip Confirmation System (TCS) to provide catheter tip placement information during the procedure. The Sherlock 3CG stylet, Sherlock 3CG TCS system, and the Site~Rite 8 Ultrasound System, include a comprehensive, integrated set of PICC placement tools such as vein location, lumen size visualisation, needle guided vein access, catheter tip orientation, catheter tip depth, catheter tip placement using ECG, and ECG placement documentation. In most instances, this removes the need for confirming PICC tip placement through radiological methods.	5 French Triple Lumen	\$131.00

TX062	Arrow Pressure Injectable Midline	The Arrow Pressure Injectable Midline Catheter is a peripherally inserted intravenous catheter manufactured with medical grade, flexible polyurethane. The Arrow Midline is designed with a non-tapered catheter body and softens in-situ to be less traumatic to the vessel. The Arrow Pressure Injectable Midline Catheter is indicated for peripheral	Double Lumen Pressure Injectable Midline, 5Fr , 20cm	\$131.00

access to the venous system for intravenous therapy, blood sampling, infusion, and pressure injection of contrast media. The maximum pressure of pressure injector equipment used with the Arrow Pressure Injectable Midline Catheter may not exceed 300 psi. The maximum pressure injection flow rate for the specific lumen being used for pressure injection is printed on the extension line hub.
