BL046	FINEVISION HP TORIC (POD FT 49P)	<p>The POD FT 49P (FINEVISION HP TORIC) posterior chamber intraocular lens is indicated for the replacement of the human lens to achieve the visual correction of aphakia and pre-existing corneal astigmatism in astigmatic adult patients in whom a cataractous lens has been removed by phacoemulsification who desire improved uncorrected vision, reduction of residual refractive cylinder, useful near and intermediate visual functions, and reduced spectacle dependence. The intraocular lens is intended to maintain rotational stability after placement in the capsular bag and is intended to be placed in the capsular bag. The GF-Glistening Free, material is an acrylic copolymer of medical quality which includes a UV absorbing filter. For the yellow intraocular lenses, a blue light-filtering chromophore is covalently bounded to the UV-absorbing material and the spectral transmittance through a central diopter IOL. They have biconvex optics with an aspheric anterior diffractive trifocal structure that partitions the light to give pseudo-accommodative vision and a posterior toric optic which compensates for corneal astigmatism. The add-power for near vision is + 3.5 diopters and for the intermediate vision + 1.75 diopters at IOL plane allowing the patient to benefit from near vision without a reading aid, and from increased spectacle independence for near and intermediate visions.</p>	<p>Optic diameter: 6.00mm; Total diameter: 11.40mm; From 6 to +35 Diopters, with 0.5 Diopter increments; Cylinders (IOL Plane) 1.00D, 1.50D, 2.25D, 3.00D, 3.75D, 4.50D, 5.25D, 6.00D.</p>	\$934.00

QQ325	Glaukos iStent Infinite System	The iStent infinite System consists of a single-use pre-loaded injector designed to deliver, with an unlimited insertion mechanism, three intraocular stents (Model G2-W) through a single incision into Schlemm's canal, creating a bypass through the trabecular meshwork to increase physiological aqueous outflow and reduce IOP. The stents used in	One Size	\$1,444.00

the iStent infinite System are identical to those in iStent inject W (Billing code RQ084), which is designed to deliver two stents.

As per the TGA submission and associated Instructions for Use, the iStent infinite is intended to reduce IOP in adult patients with primary open-angle glaucoma, pseudo-exfoliative glaucoma or pigmentary glaucoma, and can be performed with or without cataract surgery. It may also be implanted in patients who continue to have elevated IOP despite prior treatment with glaucoma medications and/or conventional glaucoma surgery.

RQ084	Glaukos iStent inject W System	An improved product to PLAC billing code RQ075 (product name iStent Inject) with a wider flange for better surgeon visualisation and stent confirmation. The improvement includes a delivery injection unit with 2 stents. Intended purpose per TGA submission is for implantation with or without cataract surgery and to reduce intraocular pressure in adult patients diagnosed with mild to moderate primary open-angle glaucoma (POAG) currently treated with ocular hypotensive medication.	One Size	\$1,444.00
RQ075	iStent Inject System	The iStent Inject is a pre-loaded injection system which delivers two stents across the trabecular meshwork to provide a pathway for aqueous humor to flow from the anterior chamber. It is indicated for use in conjunction with cataract surgery for the reduction of IOP in subjects with mild to moderate open angle glaucoma currently treated with ocular hypotensive medication. OI036	Neuro 2 Sound Processor	The behind the ear Neuro 2 sound processor performs with the Neuro Zti cochlear implants. It consists of two microphones allowing for 3 automatic adaptive directionality modes, voice tracker and wind noise reduction features. Its benefits include: smaller and more cosmetically appealing design and rechargeable batteries. The processor is placed on the auricle of the either one of the patient's ears and an external antenna transmits the acoustic signal processed by the processor, by means of electromagnetic induction, to the internal component implanted beneath the skin and secured onto the mastoid. The implant can be subdivided into three areas: 1.) the implant bell that is offered in 2 embodiments: Unslitted and slitted; 2.) the implant shaft; 3.) the perforated implant plate. The implant plate can be arranged centrically (round) towards the implant shaft or eccentrically (oval). -------	---	---	---	----------

Variable - The implant body consists of two parts, a shortenable shaft that is firmly bound to the prosthesis bell, and a prosthesis plate that has been provided with a borehole in its underside. The borehole has been dimensionally designed in such a way that it can receive the shaft after the latter has been adapted lengthwise to the respective situation in the middle ear.

The surface of the predefined contact point (upper side of implant plate and inner side of the bell) is roughened in order to facilitate better bonding to the eardrum resp. the stapes head.

PT002	Blom-Singer® Classic, Rapid Response Indwelling Voice Prostheses	A range of valved silicone voice prostheses that are placed into a tracheoesophageal puncture at the time of surgery. The Prosthesis resides between the back wall of the trachea into the esophageal wall to enable tracheoesophageal speech.	16 French and 20 French diameters, 4-20mm length (2mm increments)	\$92.00
		Benefit: Voice is produced by temporarily blocking the stoma so that exhaled pulmonary air can be directed from the trachea, through the prosthesis into the oesophagus, producing voice in the TEP segment. Fluent, conversational speech may be acquired within just a few days.		
		Blom-Singer Rapid Response VP's are available with extended tracheal and oesophageal flanges to overcome peripheral valve leakage. In addition, valve weighting can be adjusted to manage reflux and central valve leakage. This range of valves is also available in special lengths.

UK032	HANAROSTENT® HOT Plumber™ with Z-EUS IT™	A lumen apposing metallic stent is a prescription device that consists of a metallic stent, intended for placement to facilitate transmural endoscopic drainage of pancreatic pseudocysts, walled-off pancreatic necrosis and gallbladder. This stent is intended to be removed upon confirmation of cyst resolution. This device also includes an electrocautery delivery system that is able to be connected to electrosurgical generator so electrode punch tip allows easy access to the targeted tissue when the pure cut mode is activated through compatible electrosurgical unit. The stent is a flexible, fully silicone covered, self-expanding nitinol stent, which is preloaded within the electrocautery-enhanced delivery system. The electrocautery delivery system is designed to be used in the gastrointestinal tract in conjunction with commercially available echoendoscopes with a 3.7 mm diameter or larger working channel and is	Diameter 10–16mm, Length 20-40mm	\$4,345.00

compatible with commercially-available 0.035-inch endoscopic guidewires. The monopolar electrosurgical energy is used to delivery system and the generator is not included in this device.

03.06.07 - Nerve Repair Stents**INTEGRA NEUROSCIENCES PTY LTD**

IG002	NeuraGen	NeuraGen is a semi-permeable Type 1 collagen tube for peripheral nerve repair. It provides a protective environment and conduit for axonal regrowth across a nerve gap. It is biocompatible and completely resorbed. The open collagen structure facilitates suture placement. It has a resilient structure that maintains an open lumen throughout the process of axonal growth.	2mm x 2cm, 3mm x 2cm, 4mm x 2cm, 5mm x 2cm, 6mm x 2cm, 7mm x 2cm, 1.5mm x 3cm, 2mm x 3cm, 3mm x 3cm, 4mm x 3cm, 5mm x 3cm, 6mm x 3cm, 7mm x 3cm	\$1,354.00

tissues. NeuraWrap remains in place during the active phase of tissue healing and is completely resorbed after tissue response has resolved. The porous outer layer of NeuraWrap comprises a tubular matrix that mechanically resists compression from surrounding tissue and excludes scar tissue ingrowth. The semi-permeable inner membrane allows passage of small molecules (ie water, ions, metabolites, nutrients) but prevents the escape of endogenous growth factors (Nerve Growth Factor). NeuraWrap provides a new alternative for the treatment of peripheral nerve injuries.

QQ319	Apollo Endosurgery X-Tack™ Endoscopic HeliX Tacking System	The X-Tack™ System is intended for approximation of soft tissue in minimally invasive gastroenterology procedures (e.g. closure and healing of ESD/EMR sites, and closing of fistula, perforation or leaks).using tensioned helical tacks. The X-Tack system comprises respective delivery systems for tacking and cinching; tethered stainless steel HeliX tacks; and a PEEK cinch system. 1. The delivery system is composed of biocompatible plastic and drives the HeliX tacks into the tissue. This is replaced with the PEEK cinching system when the defect is ready for compression. 2. The stainless steel HeliX tacks are placed around the defect with the tether providing compression when tensioned and so enabling closure. Compression is maintained using a PEEK cinch which terminates the closing construct. 3. The PEEK cinching system is a delivery system that deploys a PEEK plug/collar to the tethering system to ensure the tissue in the defect area remains compressed.	160 and 235 cm	\$2,002.00

PN022 ACCLINO Flex Plus Stent

Acclino Flex Plus Stent is a self-expanding laser-cut Nitinol stent for aneurysm neck bridging in case of stent assisted coiling procedures. It is intended for use with embolisation materials for the treatment of intracranial aneurysms. It provides an increased range and is suitable for vessel diameters from 1.5 to 7.0 mm. For an easy handling all sizes from 3.0 - 6.5 mm are deliverable through microcatheters with 0.0165 - 0.021 ID. This allows a sequential stent and coil placement without the changing of the microcatheter. The 8.0 mm diameter devices are deliverable through microcatheters with 0.027 ID.

HW567 Neuroform ATLAS Stent System

The Neuroform Atlas (Atlas) Stent System is intended to be used for stent assisted embolization for intracranial aneurysm therapy. The purpose of the stent is to retain the occlusive devices within the aneurysm. Occlusive devices can be delivered prior to stent placement or after stent placement. The Atlas Stent System consists of a self-expanding, sterile, nitinol stent preloaded over a delivery wire inside an introducer sheath. The sheath and delivery wire are used to transfer the stent into a 0.0165 to 0.017 inch internal diameter microcatheter. After transferring the stent, the sheath is removed from the proximal end of the delivery wire. The delivery wire is then used to advance the stent to the distal end of the microcatheter. The microcatheter and stent system are

repositioned as a unit to ensure the stent is located across the aneurysm. The stent is deployed by stabilizing the delivery wire and withdrawing the microcatheter. The Neuroform Atlas stent cannot be repositioned or captured once deployed.

STRYKER AUSTRALIA PTY LTD

HW558	TransForm Occlusion Balloon Catheters	The TransForm Occlusion Balloon Catheter consists of a single lumen catheter shaft with a balloon attached at the distal end. The balloon is available in a compliant version and a super compliant version. Radiopaque markers are located at the proximal and distal ends of the balloon to facilitate fluoroscopic visualization. The balloon catheter is recommended for use with a Stryker Neurovascular 0.014 in (0.36 mm) guidewire to seal the distal segment of the catheter lumen allowing inflation of the balloon. The guidewire can be moved distally or proximally once beyond the distal tip (seal portion) of the catheter and still maintain a positive seal for inflating the balloon. The distal outer segment of the catheter shaft is coated with a hydrophilic material that reduces friction during manipulation in the vessel. A luer fitting hub at the proximal end of the catheter is used for the attachment of accessories.	Effective Length: 150 cm Balloon Outer Diameter: 3 mm - 7 mm Balloon Nominal Length: 5 mm - 30 mm Maximum Catheter Shaft Outer Diameter: 2.8 F	\$1,500.00

(male nail) and suitable D profile tube (female nail) with threaded end. It is made of high grade medical stainless steel. The male and female nails have five different diameter choices. The male nail comes in one length for each diameter. The female nails have five different length choices for each diameter. The Telescopic Nail includes a special designed corkscrew end on the distal part of the male nail that holds the nail firmly in the bone and prevents damage to the growth plate. The Telescopic Nail is indicated for children with long bone deformity corrections, fracture stabilisation, patients with osteoporotic bone and for children older than 18 months who are diagnosed with osteogenesis imperfecta.

the specific demands of advanced deformity and trauma reconstructions of foot and ankle applications. The system was developed for the treatment of neuropathic deformities, such as Charcot, requiring fusion of the medial and/or lateral columns, with or without corrective osteotomies as well as for joint fusions within the mid and hindfoot. The Fusion Beaming System consists of two different diameter implant ranges, designed for optimal implant selection for wide ranging patient anatomies, and an instrumentation including the dedicated Sterilization Tray. The Fusion Beaming System is designed with an instrumentation and technique that have been developed to simplify the surgery.

06.03.01.14 - Calcaneal

Akva Surgical Pty Ltd

VK039 C-Nail C-Nail is an intramedullary nail for minimal-invasive fixation of intraarticular calcaneal fractures. The principle is to stabilise with the nail the four to five main fragments of the fractured calcaneus in conjunction with up to seven interlocking screws and thus creating angular stable fixation. The maximum stability is achieved by fixing the sustentacular fragment towards the nail with two interlocking screws guided by a very precise aiming devise. The design of the nail is clearly marked "L" for left foot and "R" for right foot. The nail length is 65mm with a diameter of 8mm. The nail can be extended and closed with an end cap that comes in 0mm, 5mm, 10mm, 15mm and 20mm sizes. C-Nail: 65mm length x 8mm diameter (Left and Right option).

VK028 Quad Plate Plus	<p>The Guided Growth Plate System Plus consists of different sizes of quad- Plate plus, different cannulated and solid screw options. The device is designed for the gradual correction of paediatric congenital as well as acquired deformities in both the upper and lower extremities, provided that the physics are not fused. The plates feature a contoured waist and low profile for paediatric usage. There is a centre hole in the plates for a temporary guide pin to be implanted to aid application and removal of the plate. The plates are attached to the external surface of the bone over the growth plate by screws. These screws are not locked to the plate, but rather are allowed to swivel and diverge in their position as bone growth occurs. The implant acts like a flexible hinge, permitting growth at the growth plate to gradually straighten the limb.</p>	16mm plate 22mm plate

Its unique wire and half pin fixation elements provide efficient bone segment stabilisation. A biomechanically superior metal-plastic interface is stable both during and between adjustments. The system is versatile, consisting of rings, half-rings, foot plates, 5/8 rings and arches. Full control of bone segments accomplished with Orthofix circular frame allows precise movement of segments without compromising stability.

VK033	3D Telescopic Strut	Struts consist of two telescopic aluminium tubes, outer tube and an inner tube, which can be locked together at various lengths using the side locking bolt and clamp washer. The inner tube is	Struts are available in four sizes - ultrashort, short, medium and long providing adjustment range from 45mm to 318mm. Ultrashort strut range

attached to a spring-loaded, black knurled adjustment knob. The adjustment knob mates with the threaded rod in a manner such that the rod translates relative to the inner tube when the knob is rotated. This will provide gradual changes of overall strut length in 0.5mm increments. A reference arrow with plus sign located on the base of the adjustment knob indicates the direction of turning to perform strut elongation - distraction. Each strut has two special joints and one at the base of the outer tube and the other at the end of the threaded rod. Each joint has a mounting stud, which can be inserted into the mounting holes on the ring tabs and held in place by the locking screw. The rapid adjustment of the strut length is achieved by untightening the side locking bolt, sliding the inner tube relative to the outer tube to the desired length. The rapid adjustment is indicated by the inner tube scale in 1mm increments relative to the orange line mark on the outer tube. The gradual adjustment is achieved by pulling and rotating the adjustment knob resulting in a noticeable detect click every 0.5mm of

adjustment. Gradual adjustment is indicated by the scale relative to the green line mark.

VK032 3D Rapid Adjust Strut The rapid adjust strut is made of two metal casings encapsulating a threaded rod. It has the ability to correct acutely or gradually. The rapid adjust strut ends have 45 degree locking angulation with 360 degree rotation. The rapid adjust struts have unique ball and claw universal lockable joint at both ends of the strut. Two rapid adjust struts are sufficient for fracture reduction and initial stabilisation, whereas three rapid adjust struts are necessary for walking and weight bearing. Loosening of the ball claw joints allows for verification of the amplitude of angular correction and horizontal translation, magnitude of rotational correction and stability of fixation in coronal, sagittal and horizontal planes. HQ003	SURGITIME Titanium Mesh	Titanium Surgitime is a non absorbable titanium mesh made of pure titanium (ASTM F-67). It comes in many different lengths, widths, thicknesses and hole diameters. It assist bone neoformation, acting as a barrier hindering the migration of epithelial cells and of the conjunctive tissues, thus avoiding competition with the bone graft.	34x25mm- Thickness 0.04mm/Round hole 0,15mm 34x25mm- Thickness 0.04mm/Round hole 0,85mm 34x25mm- Thickness 0,08mm/Round hole 0,85mm	\$161.00

FV011	Ossix Plus	Ossix Plus is a resorbable collagen membrane intended for use during the process of guided bone regeneration (GBR) and guided tissue regeneration (GTR) as a biodegradable barrier.	15 x 25mm, 25 x 30mm, 30 x 40mm	\$224.00
FV012	OSSIX Volumax	A resorbable collagen membrane intended for use during the process of guided bone regeneration (GBR) and guided tissue regeneration (GTR) as a biodegradable barrier.	10 x 12.5mm 15 x 25mm 25 x 30mm 10 x 40mm	\$224.00

GEISTLICH PHARMA AUSTRALIA PTY LTD

GI019	Geistlich Bio-Gide Perio / Geistlich Bio-Gide Compressed	Geistlich Bio-Gide Perio and Geistlich Bio-Gide Compressed are collagen membranes containing porcine collagen in a bilayer structure. Geistlich Bio-Gide Perio is used for guided bone regeneration and is especially indicated for periodontal bone defects in oral and maxillofacial surgery. Geistlich Bio-Gide Compressed is intended to be used as a barrier membrane in the regeneration of bone	16 x 22 mm, 13 x 25 mm, 20 x 30 mm	\$224.00

defects.

GI021	Geistlich Bio-Gide	Geistlich Bio-Gide is a collagen membrane containing porcine collagen in a bilayer structure. It is used for guided bone regeneration and periodontal tissue regeneration in oral and maxillofacial surgery.	13 x 25 mm, 25 x 25 mm, 30 x 40 mm	\$224.00
GI014	Geistlich Mucograft, Geistlich Mucograft Seal	Collagen Matrix	15mm x 20mm, 20mm x 30mm, diameter 8mm, diameter 12mm	\$224.00
GI020	Geistlich Bio-Gide Shape	Geistlich Bio-Gide Shape is intended to be used as a barrier membrane in the regeneration of bone defects and used after bone grafting procedures in extraction sockets. Because of its elasticity, Geistlich Bio-Gide Shape should be used in combination with void-filling bone graft materials such as autologous bone or bone substitutes (e.g. Geistlich Bio-Oss / Geistlich Bio-Oss Collagen) whenever possible. The porous surface, facing the bone, allows the ingrowth of bone-forming cells. The dense surface, facing the soft tissue, prevents the ingrowth of fibrous tissue into the bone defect.	14 x 24 mm	\$224.00

Henry Schein-Halas Pty Ltd

HD029	BioHorions Mem-Lok RCM	Mem-Lok Resorbable Collagen Matrix is engineered from highly purified, Type I bovine collagen to provide a predictable resorption period and ensure optimal bone regeneration in periodontal, implantology or maxillofacial surgery.	15mm x 20mm 20mm x 30mm 30mm x 40mm	\$224.00
HD027	BioHorizons Mem-Lok Pliable	Mem-Lok Pliable is a strong, conformable collagen barrier membrane manufactured from highly purified porcine tissue. Predictable resorption time is 12-16 weeks. Used for guided bone regeneration and periodontal tissue regeneration in oral and maxillofacial surgery.	15mm x 20mm 20mm x 30mm 30mm x 40mm	\$224.00

HQ002	SURGITIME PTFE	Surgitime PTFE is a synthetic non-absorbable membrane that is 100% biocompatible and not derived from animal source. This Membrane is considered to be a barrier for tissue regeneration. polytetrafluoroethylene membranes or mechanical barriers for guided bone regeneration are used to prevent migration of cells from epithelial and connective tissues, thus providing a proper space for the formation of a natural fibrin structure which is the bone tissue precursor. Surgitime PTFE are a high-density sheet with a surface structure and porosity suitable to prevent intergration and passage of bacteria within the interstices of the material, and simultaneously facilitate adhesion of the host cells and the material.	30x20mm- Thickness 0,10mm 30x20mm- Thickness 0,25mm	\$159.00

GI018	Master Pin	Pins used in dental surgery for the fixation of membranes (absorbable, non-absorbable and titanium membranes) in order to avoid micro-mobility of the graft. With sharp tips and the stable construction, the pins can be precisely inserted into cortical bones. The pins have an additional minithread and are a hybrid composed of a screw and pin. The thread makes easy and safe removal possible after a healing period has taken place. This thread enlarges the surface of the shaft at the same time and therefore offers more stability.	3.5mm	\$76.00

MAXONIQ PTY LTD

QQ132	OsseoFrame	The MAXONIQ OsseoFrame is a subperiosteal, titanium (Ti64), patient-specific surgical implant individually designed from a 3D Computed	The OsseoFrame may be supplied as either a 2 post, 3 post or 4 post variant of the prosthesis.	\$3,254.00
-------	------------	--	--	------------

Tomography (CT) or Cone Beam CT (CBCT) scan provided to MAXONIQ by the referring surgeon. The OsseoFrame is fixated to alveolar bone of the maxilla or mandible to fit the natural contours. An OsseoFrame is comprised of a baseplate with holes for screw fixation and transmucosal connectors for dental prosthesis attachment. The OsseoFrame is intended to be used on the alveolar bone of the mandible or maxilla to provide a stable and permanent platform for fixation of the dental prosthesis. The OsseoFrame is indicated to restore oral function and facial aesthetics in edentulous patients missing 3 or more adjacent teeth with atrophic jaws, low sinus floors or who have undergone partial jaw resection. The OsseoFrame may also be beneficial for patients who cannot tolerate removable dentures and desire a fixed solution; who cannot tolerate complex bone graft surgery to support dental implants; or if they want replacement teeth immediately after surgery. The dental prosthesis is supplied separately and is to be fitted by surgeon, a restorative dentist or a prosthodontist. The OsseoFrame may be supplied with a biomodel and a surgical guide, both these items have separate Prosthesis Listings.

Effectively, these size variants are designed for partial overdentures (2 and 3 post variants) or a 4 post variant for full arch restoration. The 4 post, full arch variant is designed to treat a fully edentulous patient, whilst the 2 and 3 post variants are designed to treat patients missing 3 or more teeth. The clinician and prosthodontist will determine the appropriate number of posts for an individual patient.

CRT-D is equipped with an accelerometer to allow adaptation of pacing to suit the patient's activity. bipolar, 2*DF-1. Left ventricle: IS-1 bipolar (unipolar compatible).

PLATINIUM SonR CRT-D is also equipped with the RF wireless technology which enables remote monitoring of patients who have the Sorin SMARTVIEW Monitor installed at home, and wireless interrogation and device programming by Orchestra Plus programmer equipped with ORCHESTRA PLUS LINK accessory. If used in conjunction with a dedicated atrial lead featuring the SonR sensor, PLATINIUM SonR CRT-D can analyze micro-accelerations of the heart walls to derive information pertaining to cardiac contractility. The signal picked-up by the SonR sensor can be processed by PLATINIUM SonR CRT-D in order to automatically adjust AV and VV delays for optimal resynchronization therapy. PLATINIUM SonR CRT-D provides a range of therapeutic and diagnostic functions:

- high energy shocks
- atrial tachyarrhythmia prevention
- automatic lead measurements
- advanced diagnostic functions
- automatic AV and VV delay optimization

PLATINIUM SonR CRT-D is protected against high-frequency signals emitted by cellular telephones.

RF013	SonR tip PS55D Lead	The SonR tip™ lead is an atrial endocardial pacemaker lead equipped with a hemodynamic sensor embedded in the tip of a straight, bipolar RA pacing lead. Unlike other automatic optimisation strategies, the signal recorded by the SonR sensor reflects global ventricular	Length - 520mm, Diameter 2.6mm, 7.8 F	\$536.00

contractility · Optimisation by SonR is similar to continuous AV and VV optimisation by echocardiography. It is supplied in a non-MRI and MRI conditional version. The package includes a lead, with a straight stylet inserted, suture sleeve mounted and funnel mounted on the connector pin, a vein lifter and stylets.

thoracic aorta, aortic arch and descending thoracic aorta. Branches are provided to accommodate reconstruction of the major aortic branch vessels and intra-operative attachment of a perfusion cannula during cardio-pulmonary bypass where antegrade perfusion techniques are employed.

There are 40 catalogue items with the above combinations

The stented section of the graft enables treatment of the diseased descending thoracic aorta in a single-stage procedure without the need to anastomose a stented and unstented prostheses together.

Overall length: 340-390 mm.
Vascular graft length 240 mm;
Stent graft length 100-150 mm;
Stent graft diameter 20-40 mm;
Collar width 12 mm;

Thoraflex Hybrid™ device has been impregnated with an absorbable protein. The aim of the impregnation is to provide a polyester vascular prosthesis which does not require pre-clotting. The protein is a bovine gelatin which has been cross-linked to a set level to control its rate of removal. It serves in place of fibrin, which seals the polyester prosthesis during normal pre-clotting. The gelatin is hydrolyzed within approximately 14 days and is replaced by normal tissue incorporation. Gelatin has been chosen as it is a non-toxic protein, a fact which is reflected by its extensive use as a safe plasma expander.

LC198	2M Cups Double Mobility System Mobile Liners (UHMWPE)	The liner functions as part of a double mobility system. The liner articulates with an acetabular cup and femoral head as part of a total hip arthroplasty. The liner has an inner clearance of 0.3 mm with respect to the femoral head. The outer clearance has been increased to 0.6 mm to avoid locking of the outer joint due to the interposition of fibrous tissue. The centre of the inner head is cranialized with respect to the centre of the liner (1,5 mm), to permit the self-centring of the system. GK003	3D Fusion Lumbar Bone Screw	Stand-alone anterior lumbar interbody fusion (ALIF) fixation system: cage, screws and locking caps. The 3D Fusion lumbar bone screw is intended to be used as part of the integral screw fixation system and immobilize and stabilize the 3D fusion lumbar cage to facilitate spinal fusion between two adjacent vertebral bodies. -------	-----------------------------	--	--	----------

dual thread bone screws designed to fit with threaded features of the 3D Fusion lumbar Cage to secure and stabilise the fusion cage in place with patient's endplate anatomy.

GK004 3D fusion cervical screw

The 3D Fusion cervical screw is part of the integral fixation mechanism for the 3D Fusion cervical System (also consisting of the 3D Fusion ACDF Cage and Locking Cap). These components are part of separate applications. The 3D Fusion ACDF Bone Screws intend to immobilize and stabilize the 3D Fusion ACDF Cage and facilitate spinal fusion between two adjacent lumbar vertebral bodies. The 3D Fusion ACDF Bone Screws are self-drilling, dual thread bone screws designed to fit with integral fixation features of the 3D Fusion cervical system. The threaded locking cap system establishes an intrinsic link between the cage and the fixation screws, creating a rigid locked system, without distortion of the screw head

DE818	BlackArmor Carbon Fibre/PEEK Curved / Multicurved Rods	The BlackArmor material is a combination of continuous, high-strength carbon- fiber-reinforced PEEK and a procedure developed by icotec – Injection Moulding CFM (Composite Flow Moulding). The result is a non-metallic implant component with an interwoven 3D fibre architecture that provides unmatched strength and endurance. BlackArmor® is radiolucent in all diagnostic imaging modes (MRI, CT and X-ray) and will therefore not create imaging artifacts; a significant clinical benefit in the postoperative monitoring of anatomical structures and other forms of treatment. The 3DMorphic ACDF integral screw fixation device (cage) is intended to immobilize, stabilize and maintain the height between instrumented segments and support loading in the cervical spine until fusion occurs. The 3DMorphic ACDF	Footprints: 10mm to 23mm L x 08mm to 30mm W. Minimum anterior height is 6mm. L = Anterior-posterior depth (DD in the catalogue), W = width (WW in the catalogue), height and angle vary according to surgeon request as the devices are custom-made. Please refer to attached catalogue for full size range.	\$4,161.00
-------	----------------	---	--	------------

device has a trapezoidal, ring shaped footprint with a central graft window that can receive bone graft. The superior and inferior surfaces of the device are made to fit the patient's vertebral endplate anatomy and feature serrated teeth to resist expulsion from the interbody space. The anterior surface of the device features screw holes and a threaded locking cap hole as the device is designed for use with integral fixation screws and a locking cap. The device is offered in a variety of footprints, heights, lordotic and scoliotic angles according to the patient's anatomy and surgeon's specifications.

ER646	Forza XP Expandable Spacer System	The Forza XP Expandable Spacer System is comprised of an assortment of non-sterile as well as sterile, single use, titanium alloy and polyetheretherketone (PEEK) polymer spacers with height expansion capability. The expandable interbody spacer is inserted into the lumbar disc space and expanded to fit the patient anatomy. The implants are offered in parallel, lordotic, and hyperlordotic configurations to help restore the natural curvature of the spine. The implants can be used in single placement or pairs with typical approaches being transforaminal lumbar interbody fusion (TLIF) and posterior lumbar interbody fusion (PLIF). The implants feature a bulleted nose for ease of insertion and anti-migration ripples on both the inferior and superior surfaces to provide increased stability and help prevent anterior/posterior movement of the device. 	ADM is derived from full thickness human skin, that has been processed to remove cells and cellular components while preserving the extracellular matrix (ECM). The extracellular matrix is the structural framework that provides support and organization to tissues. It consists of various proteins, such as collagen, elastin, and other growth factors, that contribute to tissue strength and regeneration. The resulting acellular dermal matrix serves as a scaffold for tissue repair and regeneration. It can be used in procedures like breast reconstruction, hernia repair, wound healing, and other soft tissue reconstructions.

INSULET AUSTRALIA PTY LTD

II001	Omnipod DASH® Insulin Management System - Personal Diabetes Manager (PDM) & Software only	An insulin pump system for the continuous subcutaneous delivery of insulin at set and variable rates that receives and stores external glucose information via a rechargeable Personal Diabetes Manager (PDM). The PDM wirelessly activates/deactivates, controls, directs and monitors operation of a tubeless wearable waterproof Pod via secure Bluetooth Low Energy communication, as well as serves as a bolus calculator. The PDM provides audio alarms, alerts and reminders related to insulin delivery and the Pod. The PDM handles all processes for operation of the system and displays up to 90 days of information including basal rates, bolus doses, carbohydrates, alarms and blood glucose entries that are entered manually from any BGM meter.	The Personal Diabetes Manager (PDM) is 6.3 cm wide x 13.0 cm long x 1.0 cm high) and weighs 106grams.	\$8,077.00	The benefit for the device is payable no more frequently than once every 4 years.

03.10.02 - Personal Diabetes Manager with capability to automatically adjust the insulin delivery based on continuous glucose monitoring data

INSULET AUSTRALIA PTY LTD

QQ717	Omnipod 5 Automated Insulin Delivery System	The Omnipod 5 (OP5) Automated Insulin Delivery (AID) System includes the tubeless insulin Pod, the Omnipod 5 App on the Insulet provided controller, and the chosen compatible glucose sensor. The glucose sensor sends CGM values and trends to the Pod. The Pod houses the insulin pump and a microprocessor which holds the SmartAdjust™ Technology that uses CGM values to make decisions and automatically adjust the insulin delivered. The Pod or the sensor also sends the CGM value to the Omnipod 5 App. This is used to display the data and to manually send commands to the Pod for bolusing and for basal insulin doses when not operating in automated mode.	One size only	\$8,574.00	The benefit for the device is payable no more frequently than once every 4 years.

system dedicated to administering a pre-determined volume of a syringe at a programmed rate. This syringe pump ensures a fluid delivery, by pushing the syringe plunger and advancing the liquid to the patient through an extension set. The Agilia SP PCA syringe pump can also be used for general infusions on adults, pediatrics, and neonatal patients for the intermittent or continuous delivery of parenteral fluids (such as solutions, colloids, parenteral nutrition), medications (such as diluted drugs, chemotherapy, anesthesia drugs), blood and blood derivatives, and medications through clinically accepted routes of administration. It is intended for use by trained healthcare professionals in clinical healthcare facilities. In PCA therapy, it is also intended for use by the patient in order to self administer doses of analgesic agent, after receiving appropriate training and instructions from the clinical staff. Agilia SP PCA is a transportable and reusable device that can be used every day.

BA299	PowerPICC SOLO ² ™ HF 5 French Triple Lumen 3CG	PowerPICC SOLO ² ™ HF 5-Fr Triple Lumen 3CG comes with a Sherlock 3CG stylet which is made of specifically formulated materials designed to aid in the placement of peripherally inserted central catheters. The stylet material provides internal reinforcement to aid in catheter placement. The Sherlock 3CG stylet may be used with the Sherlock 3CG Tip Confirmation System (TCS) to provide catheter tip placement information during the procedure. The Sherlock 3CG stylet, Sherlock 3CG TCS system, and the Site-Rite 8 Ultrasound System, include a comprehensive, integrated set of PICC placement tools such as vein location, lumen size visualisation, needle guided vein access, catheter tip orientation, catheter tip depth, catheter tip placement using ECG, and ECG placement documentation. In most instances, this removes the need for confirming PICC tip placement through radiological methods.	5 French Triple Lumen	\$131.00

PowerPICC SOLO ² ™ is packaged in a tray with accessories for reliable long (greater than 30 days) or short (less than 30 days) term vascular access. The PowerPICC SOLO ² ™ catheter valve controls the flow of fluids to provide clamp-free infusion therapy. Positive pressure into the catheter (gravity, pump, syringe) will open the valve, allowing fluid infusion. When negative pressure (aspiration) is applied, the valve opens allowing for the withdrawal of blood into a syringe.	5 French Triple Lumen with 70cm Nitinol Guidewire 5 French Triple Lumen with 135cm Nitinol Guidewire	\$131.00

BA298	PowerPICC SOLO ² ™ HF 5 French Triple Lumen Basic	A peripherally inserted central catheter made from specially formulated and processed medical grade materials. Each PowerPICC SOLO ² ™ catheter has a kink resistant, reverse tapered design. PowerPICC SOLO ² ™ is packaged in a tray with accessories for reliable long (greater than 30 days) or short (less than 30 days) term vascular access. The PowerPICC SOLO ² ™ catheter valve controls the flow of fluids to provide clamp-free infusion therapy. Positive pressure into the catheter (gravity, pump, syringe) will open the valve, allowing fluid infusion. When negative pressure (aspiration) is applied, the valve opens allowing for the withdrawal of blood into a syringe.	5 French Triple Lumen	\$131.00
BA303	Provena™ Midline Catheter	The Provena™ Midline Catheters are intended to be inserted into a patient's vascular system to sample blood, administer fluids and power injection of contrast media. The unique feature of Provena™ Midline Catheters is that they are configured with a smaller outer diameter with minimal reduction to the intraluminal area assisting in providing the optimal catheter to vein ratio, whilst still enabling good flow rates to ensure the therapy delivery is uncompromised.	4Fr dual lumen	\$131.00

TX062	Arrow Pressure Injectable Midline	The Arrow Pressure Injectable Midline Catheter is a peripherally inserted intravenous catheter manufactured with medical grade, flexible polyurethane. The Arrow Midline is designed with a non-tapered catheter body and softens in-situ to be less traumatic to the vessel. The Arrow Pressure Injectable Midline Catheter is indicated for peripheral access to the venous system for intravenous therapy, blood sampling, infusion, and pressure injection of contrast media. The maximum pressure of pressure injector equipment used with the Arrow Pressure Injectable Midline Catheter may not exceed 300 psi. The maximum pressure injection flow rate for the specific lumen being used for pressure injection is printed on the extension line hub.	Double Lumen Pressure Injectable Midline, 5Fr , 20cm	\$131.00
